Utsab Shiwakoti

Junior full-stack developer

Halifax, Nova Scotia github.com/utsabshiwakoti

SUMMARY

Full-stack developer with a Computer Programming diploma from Seneca. I build and deploy complete web applications with Python (FastAPI), React and PostgreSQL, with automated tests and CI. Four live projects and one client website, each documented with its design decisions.

EDUCATION

Computer Programming diploma, Seneca Polytechnic (formerly Seneca College), Toronto

Graduated April 2025

SKILLS

Languages	Python, JavaScript, SQL, HTML, CSS	**Back end**	FastAPI, Node.js / Express, SQLAlchemy, REST API design, WebSockets, JWT auth
Front end	React, Vite, React Router, Responsive CSS, Chrome extensions	**Data**	PostgreSQL, MySQL, SQLite
Testing & DevOps	pytest, Docker, GitHub Actions, Render, Git		

EXPERIENCE

Freelance web developer, UGEC Canada

Halifax, NS · 2026

Website and lead management for a Halifax education consultancy · ugec.ca

- Lead CRM for staff: pipeline, assignment, follow-up dates, notes, bulk actions, CSV export and a daily follow-up email
- Admin security: scrypt passwords, signed httpOnly cookies, server-checked roles, TOTP two-step sign-in, rate-limited logins

PROJECTS

StatDay: Public REST API for Canadian statutory holidays

statday.onrender.com

Python, FastAPI, PostgreSQL, React, OpenAPI, Docker, GitHub Actions

- Versioned API with optional self-serve keys, rate-limit headers, ETag caching, pagination and RFC 9457 errors
- Typed Python SDK generated from the OpenAPI spec; CI regenerates it and fails if it drifts

SlotBook: Appointment booking for small businesses

slotbook-n97p.onrender.com

Python, FastAPI, PostgreSQL, SQLAlchemy, React, Docker, GitHub Actions

- Never double-books: row locks plus a Postgres exclusion constraint, proven by a test that fires 8 simultaneous bookings
- Time-zone and daylight-saving aware availability engine, unit-tested without a database

Realtime Chat: Chat rooms and direct messages over WebSockets

realtime-chat-ru2u.onrender.com

Python, FastAPI, WebSockets, PostgreSQL, React, Docker

- WebSocket auth with short-lived single-use tickets instead of tokens in the URL
- Cursor pagination for history, per-user rate limiting, and unread counts that stay correct

Job Tracker: Job search dashboard with a Chrome extension

job-tracker-ao85.onrender.com

Python, FastAPI, SQLAlchemy, React, Chrome Extension, Docker

- Chrome extension (Manifest V3) that detects submitted applications and saves them without a click
- Idempotent capture: canonical URLs, status only moves forward, and offline saves are queued and retried
